SUMMARY

Full-Stack Software Engineer specializing in ASP.NET Core and React.js, with hands-on experience architecting REST APIs using Clean Architecture and CQRS. Skilled in building maintainable, well-tested backend systems and responsive, end-to-end web applications. Proactive adopter of state-of-the-art LLMs and AI-assisted development tools to accelerate delivery, streamline code review, and boost team productivity.

EDUCATION

Khemis Miliana University
B.Sc. in Computer Science

Khemis Miliana, Algeria
2023 – 2026

TECHNICAL SKILLS

Languages: C#, C++17, JavaScript

Backend: ASP.NET Core, Entity Framework Core, LINQ

Frontend: React.js

Architecture: Clean Architecture, CQRS (MediatR), SOLID Principles, RESTful API, OOP

Databases: MySQL

Tools & Practices: Git, GitHub, Docker, Vite, Swagger/OpenAPI

Spoken Languages: Arabic (native), English, French

PROJECTS

SouqPro — Service Marketplace Platform | *ASP.NET Core, React.js*

- Built a full-stack B2C service marketplace connecting clients with verified providers across Algeria's 58 wilayas; deployed the API on Render and the React frontend on Netlify.
- Designed a Clean Architecture / DDD backend with CQRS across 4 layers (Domain, Application, Infrastructure, API), using domain aggregates and value objects.
- Implemented 3 role-based tiers (Client, Provider, Admin) with JWT access tokens, rotating refresh tokens, and RBAC policy enforcement.
- Integrated a payment gateway for a point-based lead-purchase system with provider wallet top-ups, plus a smart matching engine filtering by price category and wilaya.
- Built a provider KYC flow (CIN document upload, admin review, Verified badge), alongside a rating/review and proposal lifecycle system.

DEMAI — Intelligent Healthcare Ecosystem | *ASP.NET Core, React.js*

Graduation Project

- Built 50+ REST endpoints across 7 controllers in an ASP.NET Core API, structured with Clean Architecture and CQRS (MediatR, 43 command/query handlers).
- Modeled 15+ normalized entities with Entity Framework Core, covering medical records, consultations, prescriptions, pharmacy stock, and appointments.
- Implemented 3 role-based access tiers (doctor, patient, pharmacist) with policy-based authorization and JWT refresh-token authentication.
- Engineered the RLMA module to recommend nearby pharmacies based on medication availability and patient location.
- Integrated AI features — Gemini-based clinical assistance and Deepgram voice-to-text — for faster medical documentation; validated endpoints via documented API test runs.

MechanicalShop — Workshop Management System | *ASP.NET Core, Blazor WebAssembly*

- Built ~30 REST endpoints over 8 EF Core data models using Clean Architecture and CQRS (28 handlers) to manage vehicles, repairs, parts, stock, invoices, and service history.
- Implemented role-based authorization with Labor and Manager roles and JWT refresh-token authentication.
- Built workflows for recording diagnostics, assigning repair tasks, updating job status, and tracking repair progress across the workshop.
