SUMMARY

ASP.NET Developer with a strong background in building scalable web applications and high-performance APIs using ASP.NET Core, C#, and Entity Framework Core. Skilled in implementing Clean Architecture, Docker, and Redis to optimize system reliability and performance. Experienced in integrating MySQL and PostgreSQL backends with a deep understanding of Object-Oriented Programming and Design Patterns. Passionate about writing clean, efficient code and leveraging modern technologies to solve complex software engineering challenges.

EDUCATION

khemis miliana university

Bachelor of science in computer science

Khemis miliana, algeria

2023-2026

PROJECTS

Car Rental Platform | Full-Stack Rental Management System

[GitHub]

- Architected a full-stack car rental marketplace connecting travelers and agencies, featuring real-time availability, dynamic pricing engines, and multi-city pickup logistics.
- Developed a responsive frontend using React.js and Vite, implementing advanced filtering, sorting, and a seamless multi-step reservation workflow for vehicle booking.
- Built a robust Node.js backend integrated with PostgreSQL, utilizing specialized schemas for fleet management, booking statistics, and automated payment tracking.
- Implemented comprehensive administrative dashboards for rental providers to manage fleet inventory, monitor real-time booking analytics, and handle digital contract documentation.
- Engineered core reliability features including e-signature support for digital contracts, flight delay protection logic, and a GPS-tracked vehicle integration system.
- Streamlined deployment and database management by implementing a structured PostgreSQL backup and restoration workflow via pgAdmin to ensure data persistence and portability.

Airline Reservation System | C++ & MySQL Backend Engineering

[Github]

- Engineered a high-performance airline booking engine using C++17, leveraging Object-Oriented Programming (OOP) principles including polymorphism, abstraction, and dynamic casting for scalable system architecture.
- Implemented a Factory Design Pattern and interface-based architecture to manage diverse ticket classes (Economic, VIP) and airline-specific flight logic (Turkish Airlines, Air Canada).
- Developed a unified Payment Gateway Interface (IPayment) to support multi-provider integrations with Stripe, PayPal, and Square APIs, ensuring high extensibility for future financial modules.
- Designed a relational database schema using MySQL Connector/C++ to persist complex data relations for user accounts, real-time flight availability, and reservation history.
- Built an Itinerary Management System capable of aggregating multiple reservations into unified passenger records, utilizing unique ticket ID generation and secure role-based access control (RBAC).
- Optimized data handling by utilizing the C++ STL (Standard Template Library) for efficient memory management and implementing a Clone pattern for duplicating complex flight objects without overhead.

SKILLS

Backend: C++17 | C# | .NET 8 | Node.js | OOP | RESTful API | Entity Framework Core | LINQ

Frontend: React.js | React Router | Vite | CSS3 | Responsive Design

Architecture & Design: Clean Architecture | SOLID Principles | Design Patterns

Tools & Practices: Git | GitHub | Unit Testing | Documentation (Swagger/OpenAPI)

Interpersonal: Analytical Thinking | Problem-Solving | Technical Writing | Bilingual (English/French/Arabic) | Collaborative Development
