SUMMARY

ASP.NET Developer with a strong background in building scalable web applications and high-performance APIs using ASP.NET Core, C#, and Entity Framework Core. Skilled in Clean Architecture, Docker, Redis, MySQL, and PostgreSQL, with a deep understanding of OOP and design patterns. Passionate about writing clean, efficient code and solving complex software engineering challenges.

EDUCATION

Khemis Miliana University

Bachelor of Science in Computer Science **2023-2026**

PROJECTS

DEMAI | Graduation Project | Intelligent Healthcare Ecosystem [GitHub]

- Designed and developed DEMAI, a graduation project that connects doctors, patients, and pharmacies in one secure digital healthcare workflow.
- Built the backend with ASP.NET Core, Entity Framework Core, Clean Architecture, JWT authentication, and role-based access control for doctors, patients, and pharmacists.
- Implemented electronic medical records, consultation management, prescription creation, appointment booking, and patient medical history access.
- Developed pharmacy stock management features for medication inventory, prescription availability checks, and pharmacy-side fulfillment workflows.
- Engineered the RLMA recommendation module to suggest nearby pharmacies by combining medication availability with patient location.
- Integrated AI-oriented features including Gemini clinical assistance and Deepgram voice-to-text support for faster medical documentation.

MechanicalShop | Full-Stack Mechanical Workshop Management System [GitHub]

- Developed MechanicalShop, a workshop management system for organizing customers, vehicles, repair services, spare parts, and daily garage operations.
- Built backend APIs for service requests, maintenance records, mechanics, inventory, invoices, and customer information.
- Designed structured data models for vehicles, diagnostics, repairs, parts, stock movements, invoices, and complete service history tracking.
- Implemented role-based workflows for administrators and staff to assign repair tasks, update job status, and monitor pending or completed services.
- Created operational features for recording diagnostics, managing spare-part availability, following customer requests, and improving workshop visibility.
- Applied full-stack development practices including database design, API testing, validation, modular organization, and Git/GitHub version control.

SKILLS

Backend: C++17 | C# | .NET 8 | Node.js | OOP | RESTful API | Entity Framework Core | LINQ

Architecture & Design: Clean Architecture | SOLID Principles | Design Patterns

Frontend: React.js | React Router | Vite | CSS3 | Responsive Design

Tools & Practices: Git | GitHub | Unit Testing | Swagger/OpenAPI | Docker | Redis

Interpersonal: Analytical Thinking | Problem-Solving | Technical Writing | English / French / Arabic
