SUMMARY

ASP.NET Developer with a strong background in building scalable web applications and high-performance APIs using ASP.NET Core, C#, and Entity Framework Core. Skilled in implementing Clean Architecture, Docker, and Redis to optimize system reliability and performance. Experienced in integrating MySQL and PostgreSQL backends with a deep understanding of Object-Oriented Programming and Design Patterns. Passionate about writing clean, efficient code and leveraging modern technologies to solve complex software engineering challenges.

EDUCATION

khemis miliana university

Bachelor of science in computer science

Khemis miliana, algeria

2023-2026

PROJECTS

DEMA Graduation Project | Intelligent Healthcare Ecosystem

[GitHub]

- Built a backend using ASP.NET Core, Entity Framework Core, Clean Architecture, JWT authentication, and role-based access control for doctors, patients, and pharmacists.
- Implemented electronic medical records, consultation management, prescription creation, appointment booking, and patient medical history access.
- Developed pharmacy stock management features allowing pharmacists to manage medication inventory and check prescription availability.
- Engineered the RLMA recommendation module to suggest nearby pharmacies based on medication availability and patient location.
- Integrated AI-oriented features including Gemini-based clinical assistance and Deepgram voice-to-text support for faster medical documentation.

MechanicalShop | Full-Stack Mechanical Workshop Management System

[Github]

- Developed a mechanical workshop management platform to organize customers, vehicles, repair services, spare parts, and workshop operations.
- Built backend APIs for managing service requests, maintenance records, mechanics, inventory, and customer information.
- Designed structured data models for vehicles, repairs, parts, stock movements, invoices, and service history.
- Implemented role-based workflows to help administrators manage workshop activity and track repair progress.
- Created features for recording diagnostics, assigning repair tasks, updating job status, and maintaining vehicle service history.
- Improved operational visibility through organized records for stock, completed services, pending repairs, and customer follow-up.
- Applied full-stack development practices including database design, API testing, validation, and modular project organization.

SKILLS

Backend: C++17 | C# | .NET 8 | Node.js | OOP | RESTful API | Entity Framework Core | LINQ

Frontend: React.js | React Router | Vite | CSS3 | Responsive Design

Architecture & Design: Clean Architecture | SOLID Principles | Design Patterns

Tools & Practices: Git | GitHub | Unit Testing | Documentation (Swagger/OpenAPI)

Interpersonal: Analytical Thinking | Problem-Solving | Technical Writing | Bilingual (English/French/Arabic) | Collaborative Development
